

**Date: 26/02/2026**

**School:** SCOPE

**Reg. no.: 23BCE8149**

1. Create a database called 'vehicles' and write a MongoDB query to select database as "vehicles".
2. Write a MongoDB query to display all the databases.
3. Create a collection called 'two\_wheelers'. (use capping) and Create a collection called 'four\_wheelers'.
4. Add 5 two-wheeler details to the collection named 'two\_wheelers'. Each document consists of following fields as bike\_name, model (gear or gearless), category (100cc, 125cc, 150cc, 200cc), colors\_available (red, black, blue, sport red etc) as array, manufacturer, performance (out of 10), timestamp (date and year release) and price.
5. Add 5 four-wheeler details to the collection named 'four\_wheelers'. Each document consists of following fields as vehicle\_name, model (commercial or own), category (car, lorry, bus, mini truck, heavy truck, containers), variants (vxi, zxi, petrol, diesel etc) as array, manufacturer, performance (out of 10), timestamp (date and year release) and price.
6. Write a MongoDB query to display all documents available in two\_wheelers and four\_wheelers.
7. Write a MongoDB query to display only vehicle name and price in all the collection of the database
8. Write a MongoDB query to display two\_wheelers from a particular company
9. Write a MongoDB query to display four\_wheelers available in diesel variants
10. Write a MongoDB query to display vehicles name, category and manufacturer details whose rating is more than 5.

```
docker exec -it mongosh mongosh

{
  ...
}

insertOne({
  "objectID": "69ab3aa4d1a099c9eb837f118c",
